CERTIFICATES AND PRIZES

Well done to all the learners from Boshof Combined School, Boshof Intermediate School and Aramela High School, who attended the Maths and Science Leadership Academy every Thursday afternoon last year. They were awarded medals and a certificate for 100% attendance and performance, with cash prizes for the top three learners, at the end-of-year awards ceremony.

Funded by Boshof Solar Power these extra maths and science lessons give learners the opportunity to practice the work done at school, to become more confident as well as giving them a better chance to succeed.

"We also support programmes to fund teachers and intense maths sessions for learners from Grade 4. This helps to solidify the foundations and helps young learners carry maths through to Grade 12."

SUCCESS TAKES DETERMINATION

"Running a small enterprise in a rural area brings its own set of hardships and challenges. This is made more difficult if you don't have proper equipment and limited finances, which is why we are committed to supporting sustainable local enterprises."

Boshof egg farmer, Scott Moshane, has been able to erect a proper poultry egg laying structure for his chickens with the view to expand his business, with the help of Boshof Solar Power's enterprise development programme.

Mr Moshane stood out as a determined entrepreneur, who is passionate about making his business work. He started his poultry farming enterprise by converting an old storeroom, as housing for his first stock of chickens and is now able to make a living from his business.

A NEW CRÈCHE FOR HERTZOGVILLE CHILDREN

The Department of Social Development, parents, children and community members and leaders gathered to celebrate the launch of the **Thari Ya Mme Educare Centre**, in Hertzogville, late last year.

This is one of Boshof Solar Power's flagship education projects, which provided an entire crèche that includes five fully equipped and furnished mobile classrooms that can easily and safely accommodate the 75 children that currently attend this facility.

Additionally, a palisade fence, toilets, an office, sick bay, and even equipped kitchen has been installed. The crèche also has a storeroom and most importantly outdoor play equipment and educational material to stimulate the love of learning.

Mpho Mogoera, School Principal of Thari Ya Mme Educare Centre:
 "It has been empowering to have this new crèche built for us and truly wonderful that our children now look forward to coming to school each day. What a pleasure it is to see the joy light up their faces each morning."

"We are excited to have been able to provide a crèche that is a better, safer and healthier environment for these young children and their teachers."

SUPPORT FOR YOUNG GIRLS IN DEALESVILLE

Boshof Solar Power has been funding a programme to help young girls across four high schools and three primary schools in Boshof, Hertzogville and Dealesville, by providing sanitary towels.

"This act of support has meant that we don't experience a high rate of absenteeism due to girls' menstrual cycles. Our girls were always taken care of and in the process their dignity was kept intact." Mrs Mosieleng, Deputy Principal of Kgololosego Secondary School, Dealesville.
